

Product Information

JAK2 Inhibitor V

Cat No: 17684 - 1 mg

General Data

Shipping:	dry ice
Formulation:	A solution in ethanol
Purity:	≥95%

Product Overview

Janus-associated kinases (JAKs) are cytoplasmic tyrosine kinases that are required for activating the signaling of certain cytokines and growth factor receptors. Many myeloproliferative diseases have been linked to a mutation in JAK2 in which a switch from valine to phenylalanine occurs at the 617 position (V617F).{27171} JAK2 Inhibitor V is an inhibitor of the autophosphorylation of wild type and V617F mutant forms of JAK2, displaying IC₅₀ values between 10 and 30 μM.{30753} It has no effect on Tyk2 or c-Src kinase function. JAK2 Inhibitor V blocks the proliferation of erythroleukemia cells and human hematopoietic progenitor cells expressing JAK2-V617F.{30753}
