SAMPLING

ENVIRONMENT & ENDOCRINE DISRUPTORS

Sample handling has become an essential part in the modern analyst toolbox.

In order to get the most reproducible results, it is critical to take care of the samples from the collection to the first step of the analytical procedure.

At early stage after collection, several events may affect the concentration of the target compound.

In order to fix the concentration as close as possible to the physiological concentrations, Bertin Bioreagent has developed a **range of solutions ranging from inhibitor cocktails to sampling tubes.**

CUSTOMIZED SAMPLING TUBES WITH DIFFERENT INHIBITORS CAN BE PREPARED UPON REQUEST.
